

/**
* **Generic Authentication Flow**
*
* **@author Er Galvão Abbott**
* **@license Apache V2 License**
* **@link <https://github.com/galvao/auth-flow>**
*/

Legend:

Positive (True)
 Negative (False)

FA - Failed Attempts
W, X, Y, Z - Arbitrary numbers
mu - Minor (time) unit
Mu - Major (time) unit

Personal Notes*:
3 authentication attempts would take at least 45s (15s / attempt) - Without saved login/email
With saved login/email, would take at least 6s (2s / attempt)

Replace "Profile editing" with whatever fits best for your application to "activate" an account.

* Obvious approximations, may change from application to application
